The 3.2 megapixel sensor and 3x optical zoom and 3.2 digital zoom 9.6x total assure great looking pictures.Despite its entrylevel designation in Canons digital lineup, the 3.

2megapixel PowerShot A70 is a surprisingly advanced model with a higher resolution than its counterpart A60 model and more manual features than youll find on most digital pointandshoots. Optics and Resolution The PowerShot A70 features a 3.2megapixel sensor that can capture images up to 2,048 x 1,536 pixels, producing print enlargements up to 11 by 14 inches. Movie Mode Shoot

up to three minutes of MPEG video at resolutions up to 320 x 240 pixels with sound, editing controls, and VCRlike playback. You can also shoot video at up to VGA resolution 640 x 480 for 30 seconds. The camera can also attach voice memos or sound files of up to 60 seconds to each image. More Features Offering a wider scope for photographic experimentation, Canon has also included manual, aperture priority, and shutter priority exposure modes. These modes are supported by a metering system that boasts evaluative, centerweighted average and spot options. Canons DIGIC DIGital Imaging Core processor ensures excellent color rendition and white balance for every shot, as well as superfast auto focusing, noisefree imaging, and advanced flash exposure performance. Other features include 1.5inch TFT transreflective LCD monitor. Builtin flash with auto, on, off, manual, and redeye reduction modes. Shot modes include manual, portrait, landscape, night scene, stitch assist, and more. Printing Canon has introduced a series of printers designed to work directly with its lineup of digital cameras. Using these printers, no computer is requiredsimply connect the camera to the printer and start printing. Printers include Canons bubble jet direct printers S830D and S530D, and card photo printer CP100. Of course, photos from your camera can also be printed on any home computer system with an inkjet printer, sent off for online processing, or simply enjoyed on your computer screen. Power, Size, and Contents The camera is powered by four AA batteries alkalines included; rechargeable NiMH batteries recommended.

It measures 4.0 by 2.5 by 1.3 inches and weighs 7.6 ounces without batteries. This package includes the PowerShot A70 digital camera, 16 MB CompactFlash card, four AA batteries, USB and AV cables, wrist strap, and ArcSoft Camera Suite CDROM and USB drivers for Windows and Mac.It features a command dial with 12 shooting modes, in a compact and durable metal body. The PowerShot A70 utilizes a high speed 5 point AiAF system equipped with Canons worldrenowned optics with its 35105mm lens to achieve superior photo images. The A70 boasts Canons exclusive DIGIC Imaging Processor with iSAPS Intelligent Scene Analysis based on Photographic Space technology that provides fast high quality image processing, improved color accuracy and enhanced battery life. Enjoy superb VGA 640 x 480 movies for up to 30 seconds with the PowerShot A70. No computer is necessary when using the PowerShot A70 direct print mode, simply connect the camera with a Card Photo Printer or Bubble Jet Direct Printer and admire your photos on the spot. The PowerShot A70 is compatible with a wide range of accessories, including wide angle and telephot.Superb Image Quality With the PowerShot A70, spectacular image quality is effortless. The powerful 3.2 Megapixel CCD ensures vivid, sharply detailed images. Excellent resolution means you can enlarge and crop with confidence. Equipped with a genuine Canon 3x optical zoom lens, the PowerShot A70 ensures highresolution upclose coverage. In the A70, a 3.2x digital zoom creates total zooming power of 10x. Zooming is quick and seamless for spontaneous shooting. Selectable 5point AiAF and Singlepoint AF The choice is yours. Choose single, centerpoint AF for the easiest way to sharp focus. Or use the cameras sophisticated 5point AiAF system that lets you put your subject almost anywhere in the frame. Both systems ensure precise focus in any shooting situation, whether the camera is held horizontally or vertically.

Exclusive Canon DIGIC and iSAPS Technology The A70S DIGIC Imaging Processor revolutionizes how you shoot digital by allowing the camera to process images faster and improving the accuracy of the autofocus. DIGIC also reduces the effects on noise in your images.iSAPS technology is an entirely new scenerecognition technology developed for digital cameras by Canon. Using an internal database of thousands of different photos, iSAPS works with the fast DIGIC Imaging Processor to improve focus speed and accuracy, as well as exposure and white balance. Movies Complete with Sound up to 3 Minutes Long Now you can shoot movies right from your digital camera while a builtin speaker clearly records sound. When you replay your movies on the LCD screen, youll enjoy VCRlike operations including next frame, previous frame, fast forward and fast reverse. You can even jump to the start or end of a clip and edit out unwanted scenes.To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system

considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. E. Orchard 5.0 out of 5 stars I have the Powershot A60 and have worked a bit with the A70. The only difference on these cameras is that the A70 has more megapixels, other than that they are THE SAME. The cameras offer various features, each with several different ways to manipulate the camera, including shutter speed and aperture. For the beginner, it offers a few preset options that allow a quick switch to the desired need of the user. The manual is very clear and easy to apply. I would recommend this camera to someone wanting a point and click camera, as well as a more advanced person desiring some control of the camera. The only complaint about these cameras is that they are poor for low light photos.

The lowlight problem I have is in the requirement of using the flash and that the camera will usually not focus in lowlight, creating notsonice blurry memories for many indoor family events. This camera has optional shutter speeds of up to 15 seconds, which I like to use with streams and other pictures involving water. I havent yet played with the aperture, but it seems like it will be fun to play with as well. If you are wondering if you need 3 MP A70, consider what you want to do with the pictures. I would recommend a 3 MP if you want to do some cropping or want to blow up pictures greater than 5x7. I simply use my A60 just for 4x6 and looking at pictures on my computer, which it does an excellent job of. I personally prefer Lexars 12x or higher cards. Get rechargable batteries!!! Amazons prices seems to be the cheapest for both cameras and compactflash cards or within a couple bucks of other places. The camera has been dropped numerous times and has also taken a tumble down a 20 foot rocky steep hill I thought it was a goner after that one. It has endured backpacking, rock climbing, and general outdoor adventures with me, and although its casing shows many scraps, dents, and scratches, the cameras functionality is beyond all of my expectations. The only problems that have developed is that the LCD seems to be dying slowly and about 20% of indoor poorly lit shots turn out grainy and have horizontal lines all of which occurred after that major tumble, so I expect that is the cause; that is, 80% of indoor shots still look great. At the prices you can find this camera at around the internet, it is an awesome intro and general use digital camera, and with the low price, you can even pick one up for your kid since it is now so cheap look elsewhere than Amazon. Anyways, I am looking to pick up a second one of these for the inevitable event that I completely destroy this sturdy camera.

Also, in its 2 years of use, I can honestly say that I have not found a single time where I truly needed more than my 2 MP to get a great shot. I have taken this camera to the Canadian Rockies, to the Western Caribean, and all over the western US, and of all of the pictures I have, I dont see a true need for a higher megapixel than 3 MP mine is 2 MP or zoom 3x, unless you need a camera for your profession. If your camera is used for prolonged periods, the camera body may becomeA quick introduction intended for new users who wantPage 6 Table of ContentsThese pages arePage 7 Night Scene Mode. 72Replacing the Date Battery. 191. Hope, this is what you are looking for. Regards Sunny. P.S If your problem is solved, please do accept the solution. Login to post If you are able to goto a menu setting and still have pixel issue, then the video interface for the display is damaged. Not usually worth repairing. If the menu shows clear, then try to take a picture, and use a computer to view the picture USB cable, or remove the memory card. If the picture shows pixels, then the image sensor is bad, and almost never worth repairing unless high end camera and under warranty.Ia there any quick fix for should I bin it Good Mega Pixels 8 14 rubbish mega pixels 2 6. hope this helps!This may be an expensive solution.Check whether you have a worldwide warranty from Canon, that will help you on saving costs.

Its expressed in megapixels and is simply the product of the number of pixels in the width of the picture times the number of pixels in the length. Its equal to the number of pixels in the picture divided by the width of the displayed picture on the device. Now Im pretty sure theres no printer currently capable of this feat. The example above shows that the rush for more megapixels is not necessarily where consumers or camera manufacturers should be focusing their attention. Most people really only need something around the 3MP range for printouts or display on their monitor screens.What can I do to fix this Answer questions, earn points and help others. Howe ver, Canon makes no warranties concerning, and is not responsible f or damages resulting from, use of non Canon Brand Accessories. 01cover.p65 02.12.14, 949 AM 3 Please be aw are of this and take care when operating the camera f or an e xtended period. About the LCD Monitor The LCD monitor is produced with extremely highprecision man ufacturing techniques. More than 99.99% of the pixels

operate to specification. Less than 0.01% of the pixels ma y occasionally misfire or appear as red or black dots. This has no effect on the recorded image and does not constitute a malfunc tion.
